**HAPPY SATISFIED CUSTOMERS!**

Our unique "Conveyor Belt" action...

carries the patient from surface to surface, powered only by a gentle "push"...

Soft Foam Core - NO metal rollers

**Lateral transfer without lifting** No lifting required, staff back injury is reduced. The result can be savings on both worker's compensation and insurance.

**Lateral transfer without noise** Patients are not disturbed, annoyed or frightened by noise associated with airflow systems.

**Priced well below other technologies** You can purchase a Gold Rollboard for every room in your facility at a fraction of the cost of mechanical devices and airflow mattresses.

**Patient rides on a soft surface** Patient is comfortable with far less risk of skin tears, injury, bruising and agitation associated with transfers on slide sheets and plastic boards.

## Rollboard bridges the "Gap"

Older airflow technology requires a bridge to cover gaps between surfaces. Slide sheet transfers across gaps are painful to the patient. Rollboard automatically bridges the gap and the patient feels nothing.

## THE SCIENTIFIC EVIDENCE - TWO MAJOR STUDIES:

**RIGHT:** MEMIC, a leading New England Worker's Compensation insurance specialist, recently completed a rigorous scientific evaluation of Lateral Transfer Devices to find the best solutions for reducing friction and lowering push/pull forces, and a review of non-motorized friction reducing devices used for Lateral Transfer. The results speak for themselves:

**BELOW:** Here are the results of a recent study by Andrea Baptiste, MA, OT, CIE, and Kay Steadman, MA, OTR, CHSP.

The surprising fact is that in three out of four of the categories, the Rollboard not only required the least force, but also required as much as 15% less force than the Air Assisted product!

Once again the Rollboard proves to be the safest Lateral Transfer Device and, at about a quarter of the cost of air-assisted devices, the best value for your safe patient handling dollar!

For the complete details on these two important studies, visit [www.mcauleymedical.com](http://www.mcauleymedical.com)

Non Motorized Device	Peak Pull Force Average of 4 trials	Patient Comfort Rating 1=best	Probability of Low Back Injury
Cotton Draw Sheet	Highest Peak Pull Force	4	Highest Probability of Back Injury
Wooden Board			
White Plastic Board			
Blue Plastic Transglide Board			
Metal Roller Board			
Plastic Slide Sheet			
Two Piece Nylon Slide Sheet			
Tubular Nylon Slide Sheet			
Rollboard	Lowest Peak Pull Force	1	Lowest Probability of Back Injury

All of these devices cost less than \$1,000 each
